protein search, using sw model OM proteiu

September 5, 2002, 15-31-39; sourch time 23,39 seconds (without alignments) 10.252 Million cell updates/sec Ruti on:

US-09-744-804-36 49 1 NLL.RRMWVT 9 Title: Perfect score: Sequence:

Scoring table:

BLOSUM62 Gapop 10.0 , Gapext 0.5

Total number of hits satisfying chosen parameters.

105224 seqs, 38719550 residues

Searched:

Minimum DB seq length: 0 Maximum DB seq length: 200000000

Post processing: Minimum Match 0%

Swissprot\_40.\* Database :

Listing first 45 summaries

Maximum Match 100%

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by unalysis of the total score distribution.

   Those tumour associated antiqens described in records AAY82806-Y82824 and AAY82855-YY82806 are derived from Uroplakin, such as Uroplakin II, Uroplakin Ta, Uroplakin III and Uroplakin Ib. Those described in records AAY82825-Y82829 are derived from prostate specific antigen (PSA). Those described in records AAY8283 are derived from prostate specific membrane antigen (PSAA). Those described in
   from Lactadherin (BA-46)— Those described in records AAY82847-Y82854 are derived from Mucin and those described in records AAY$2871-Y82882 are derived from Teratocarcinoma derived growth factor (CRIPTO-1).
   Tumor associated antiqen peptides, especially derived from uroplakin, useful as vaccines to prevent or cure cancers including breast, bladder, prostate, pancreas, ovary, thyroid, colon and stomach -
   The amino acids located at positions 2 and 9 of the tumour associated antiques are the anchor residues which participate in the binding to MHC class I molecules, more specifically HLA-A2. More tumour associated antiques are described in GENESEQ records AAY82805 Y82882.
   Gaps
   HMFG; human milk fat globule; antigen; immunogen; vaceine; virucide;
  YY82836 AAY82839 are derived from prostate acid phosphotase
Those described in records AAYM2M40-YM2M46 are derived
  treatment, prevention and cure of cancer or cancer metastases. The cancer may be breast, bladder, prostate, parecreas, ovary, thyroid, colon, stomach, head or neck cancer or a careinoma. The tumour associated antigens are presentable to the famine system by BLA As molecules and are generally between 8 to 10 amino acids in length.

Lactadherin protein was found in exosomes produced by dendritic cells. The protein is involved in the phagocyrosis of particulate antiqens by dendritic cells. Exosomes produced by dendritic cells exposed to tumour antiques induce potent immune responses, lactadherin or variants of it may be used in the mediation of an immune response. Variants of
   Chimeric isolated (human) lactadherin polypeptide that functions as an adaptor of cross-priming to eliminate pathogenic antiqens, e.q. in
  Gaps
   used to prepare MABs for use in immunotherapy, immunohistopathology, prognosis, diagnosis, imaging and therapy. Recombinant antiqen can be expressed in prokaryotic or (glycosylated) in cukaryotic cells.
used in assays to determine the presence of a cancerous tumour of
  A complete cuNA sequence for the 46 kDa HMPG antigen, a major component of the apical surface of the normal breast epithelial cell, was obtained by PCR and RACE methods. CDNA clones can be

   The present invention provides the protein and coding sequences of movel proteins from a rariety of cradisms, including homen, but, horse, cow, pig, hamster, monkey, macaque, yeast, backeria, full (I), sea urchin and tomato. These were durined from expressed sequence tags (ESIs) from the organism of interest. They can be used in diagnostics, toronsics, gene mapping, identification of muchtons, to ussess biodiversity and for nutritional purposes. The present sequence is a protein of the invention.
lactadherin may be used for inhibition and/or stimulation of the cross-priming of antigens and stimulation of the phagocytosis of antigens by dendrific cells. Compositions derived from factadherin can also be used on monitor an immune response, more specifically a CTL (cytotoxic T lymphocyte) response and also to produce CTLs specific for a selected antigen. The present sequence is the human

   polynocheridas are also used in diagnostics as expressed sequence tags for identifying expressed genes. (i) is useful in que bluedey techniques to restore notical activity of (II) or to tread disease states involving (II). (II) is useful for generating antibodies against if, detecting or quantificial a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) and (II) and (II) and (II) and (II) are useful for treating
   disorders involving aberrant probein expression or biological activity. The polypeptide and polynucieotide sequences have applications in diagnostics, forensits, gone mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human
   diagnostic amino acid sequences of the invention.
Note: The sequence data for this patent did not appear in the printed
specification, but was obtained in electronic format directly from WIPO
  polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCB) primers, aliquences, and for chromosome and gene mapping, and in recombinant production of (II). The

This invention describes a movel isolated nucleic acid (1) encoding ODE (uridine diphosphate) R acety/glucosaminyl.bctal, 4 or application of all an acid (1) encoding options among the containing the repeated disacremation most file for the containing the repeated disacremation most file acid (1) is useful for tecombinant expression of Worls, to alter adhesion and recognition properties of transfected cells and to produce glycoproteins
  New nucleic acid encoding a glucosaminy! transferase, used for in vivo
  substituted by polylactosaminealycens, when introduced into cells that express glycoproteins. Vectors containing (1) are used in gene therapy and for production of transgenic animals. Fragments of (1) are used to
  detect related sequences from other species and as antisense reagents. This sequence represents the human 36nl protein described in the

  The invention relates to antisense inhibitors of genes essential to prokatyctic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokatyctes used are Escherichia coli, Staphylococcus and proteins and encoded and promoniae, Pseudomonas acuginose and Enterococcus faccalis. The forential coliferation of potential new targets in relating proteins used in proliferation of potential new targets to active development. The antisense nucleic acids can also be used to obtain antibodies expended to be included to the expressed proteins. The proteins can be used to serve of engineering to the expressed proteins. The proteins are sequenced in a state of a sequence is also useful to serven for homologous nucleic acids which are respired for cell protein in a wide variety of crisals.

by decreasing anglogenesis in cancerous tunkais and treating myordridal infarction and promoting healing, by increasing anglogenesis. Iransgenic non-human animals, having disrupted arginine-rich protein (APP), are useful for determining the clinical stage of ovarian tuncrous, which is useful for determining it the tumour has potential for metastasis. ARP is useful in gene therapy and in diagnostic applications VEGFMA proteins are useful in the treatment of tumours, neoplasias, hemangiomas, rheumatoid arthritis, atherosclerosis, idiopathic pulmonary fibrosis, vascular restensis, hemophile joints, hypertrophic stats, Osier Weber advances, seleroderma vascular adhesion pathologies, synchlis, dermattis, endometriosis, diabetic retinopathy neovascularistis, endometriosis, diabetic retinopathy neovascularistic dermattis, endometriosis, diabetic retinopathy neovascularistic dermattis, endometriosis, diabetic retinopathy neovascularistic healing. The present sequence represents the amino acid sequence of human ARP.
  The invention relates to modulating angiogenesis and cell survival that involves modulating the arrivity of at least one vascular endulabelial growth lactor VBGP)-incolulated game polypepi ide the method is useful for modulating angiogenesis and cell survival, for treating tumour and cancer

  24 GUN:
Protein identification, signal transduction pathway, metaholic pathway, hybridisation assay, genetic mapping, gene expression control, promoter, termination sequence.
   The present invention provides the protein and coding sequences of a number of human shear stress response proteins. These are useful in the diagnosis, treatment and screening of vascular diseases caused by arteriosclerosis, including heart failure, post-PTCA restenosis and

Prod. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by unalysis of the total score distribution.

  treatment, prevention and cure of cancer or cancer metastasss. The cancer may be breast, bladder prostate, pancreas, ovary, thyroid, colon, standard, head or neck cancer or a carcinoma. The tumour associated antiques are presentable to the immine system by HLA-A2 molecules and are quencially between 8 to 10 amino acids in length. The amino acids located at positions 2 and 9 of the tumour associated antiques are described in participate in the binding to MHC class I molecules, more specifically HLA-A2. More tumour associated antiques are described in GDNHSBQ records AAY82806-Y82882 Those Jumest associated antiques described in GDNHSBQ records AAY82806-Y82882 and AAY82855 Y82869 are derived from Uroplakin ib. Those described in GDPJAkin ib. Those described in records AAY8285 are derived from prostate specific antique records AAY82829 are derived from prostate specific antique (PSA). Those described in records AAY8285 are derived from prostate specific antique
   prostate specific membrane antigen (PSMA). Those described in records YY82846-AAX82849 are derived from prostate acid phosphetase (PAP). Those described in records AAY82841-Y82846 are derived trom Lactadherin (BA 46). Those described in records AAY82847-Y82884 are derived from Mucin and those described in records AAY82871-Y82883 are derived from Teratocarcinoma derived growth factor (CRIPTO-1).

Sequences AAB23825 B23048 represent human SECX proteins. The SECX proteins of the invertion are either serrented or rembrane associated proteins and act as regulator of cellular proliferation and differentiation. SECX proteins on nucleotides are useful for diagnosing the presence of, or predisposition to, a disease associated with altered several softs proteins and nucleotides. The SECX proteins are also useful to serien compounds that modulate SECX activity or expression. The interaction of a SECX protein with other cellular proteins may be useful to modulate the activity of a partner protein cellular proliferation, cellular differentiation and cell survival. SECX nucleotides are useful for the recombinant expression of SECX gene. They may also be used to modulate sizex expression of SECX gene. They may also be used to modulate sizex expression for using antisense oignomicientes). SECX nucleotides of the result of the sections in the SECX gene. They may also be used to modulate sizex expression for using antisense oignomicientes or type in a biological sample, and in forensic biology. have a mutation in the gene encoding a protein involved in internal storage polymer polyhydroxybutyrate (PHB) synthesis that allows the mutant strains to produce PHB delicient sphindans. Sphindans are capsular polysaccharides secreted by bacteria of the genus Sphingomonas. The

The invention relates to mutant strains of Sphingomonas species which

Example 1; Page 84-86; 98pp; English.

polyhydroxybatyrate synthesis

Mutant strain of Sphindomonas species useful for producing sphingan, has a mutation in the gene encoding a protein involved in
